PROFESSIONAL SUMMARY

Frontend Engineer with nearly 4 years of remote experience operating at a senior level, building high-performance React/TypeScript SaaS applications for US startups. Expert in modernizing legacy codebases, AI/LLM integration (RAG, streaming), and AWS cloud architecture. Delivered measurable impact: increased rendering performance by over 2.5x (22 to 58 FPS), reduced build times by 87%, and successfully mentored junior engineers to scale product delivery.

TECHNICAL SKILLS

- **Languages:** JavaScript (ES6+), TypeScript, SQL
- **Frontend:** React.js, Next.js, Redux Toolkit, TanStack Query, HTML5, CSS3, Tailwind CSS, Vite, Framer Motion, Chart.js, Axios
- **Backend & APIs:** Node.js, Express.js, REST APIs, GraphQL, WebSocket, Webhooks, JWT
- **Cloud & DevOps:** AWS (Amplify, Cognito, Lambda, DynamoDB, S3, CDK, SSM, SQS), Vercel, Netlify, GitHub Actions, CI/CD
- **Databases & ORMs:** MongoDB, Mongoose, Prisma, Relational Databases
- **AI/LLM Integration & RAG:** OpenAI, Claude, Qwen, DeepSeek, RAG (Retrieval-Augmented Generation), Vector Databases (Context-aware prompting, streaming, agentic workflows)
- **Tools:** Git, VS Code, WebStorm, Figma, Zeplin, Jira, Trello, Agile/Scrum, Stripe, Intercom, Sentry, Google Analytics

PROFESSIONAL EXPERIENCE

[Jeda.ai](#) (formerly Dojoit, Inc., San Jose, CA) | Remote Frontend Engineer | Oct 2022 - Sep 2026

Key Initiative: AI Canvas Whiteboard (Legacy Modernization)

Tech Stack: React 18, Vite, Tailwind CSS, Fabric.js, GraphQL, AWS Cognito, AWS Lambda, Azure AI, Redux Toolkit.

- Migrated 5,000+ LOC from class components to functional components and hooks, reducing re-renders by 50% and increasing rendering performance from 22 to 58 FPS on mid-tier devices.
- Upgraded build toolchain from CRA/Babel to Vite and React 16 to React 18, slashing build times by 87% (from 90s to 12s), and redesigned UI with Tailwind CSS, creating 30+ reusable components and reducing CSS bundle size by 45%.
- Engineered secure, keyless AWS Lambda-to-Azure AI auth using Cognito OIDC, Microsoft Entra WIF, and SSM with cached Bearer tokens, and implemented hybrid Cognito auth (OTP + email link) for instant post-registration login.
- Applied Command Pattern for canvas drawing tools (undo/redo) and Strategy Pattern for dynamic renderer selection (flowchart, mind-map, SWOT, table) based on AI JSON responses, maintaining **robust state consistency**.
- Integrated multi-AI model selector (OpenAI, Claude, Qwen) for context-aware diagram generation handling 50+ concurrent requests, and built cross-stack workflow converting AI outputs to downloadable text and PPTX files.
- Refactored global state from Redux to Redux Toolkit, decreasing boilerplate by 70% and enabling time-travel debugging.

Key Initiative: AI Data Visualization Chat Platform (SaaS)

Tech Stack: React 18, TypeScript, TanStack Query, GraphQL, REST APIs, WebSocket, Chart.js, AWS Amplify, CSS Grid.

- Architected the frontend using React 18, Vite, and TypeScript, utilizing lazy loading and code splitting to reduce initial bundle size by 40% and improve LCP by 35%.
- Implemented TanStack Query for REST endpoints and Apollo GraphQL for optimistic UI updates, cutting redundant API calls by 60% and improving perceived performance.
- Integrated AWS Amplify Auth (Amazon Cognito) with custom token management and **client-side RBAC aligned with backend authorization** for 3-tier SaaS subscriptions, ensuring secure route protection across all user tiers.
- Built **WebSocket-based real-time streaming** with **cross-browser session synchronization**, enabling stateless chat continuity where users can access active AI conversations from any device/tab using shareable URLs without losing stream context.
- Developed a reusable renderer system with Chart.js supporting 8+ visualization types with sub-200ms render times.
- Built a dynamic CSS Grid visualization engine with drag-and-drop columns and GRID/JSON toggles, cutting user data analysis time by 25%.

Technical Leadership & Cloud Infrastructure

Tech Stack: AWS CDK, GitHub Actions, DynamoDB, SQS, System Design.

- Built AWS CDK serverless stacks (Lambda, SQS, DynamoDB, S3, SSM) and established GitHub Actions CI/CD pipelines, reducing deployment errors by 90%.
- Conducted 1.5-hour system design interviews, evaluated 6+ candidates, and successfully hired/mentored 3 junior frontend developers who delivered features for 8+ months.
- Maintained 100% backend API compatibility during full UI rewrites, eliminating backend rework and accelerating cross-team delivery by 3 months.
- Achieved 95+ Lighthouse scores for accessibility and performance across key user flows.

PERSONAL PROJECTS

AI-Powered Movie Search and Recommendation Engine | [Live Demo](#)

Tech Stack: React, Node.js, Express.js, MongoDB Atlas (Vector Search), OpenAI API, Hugging Face, REST APIs, Netlify.

- Engineered a **semantic search** and recommendation engine using MongoDB Atlas **Vector Search** and **OpenAI/Hugging Face embeddings** to deliver context-aware movie suggestions based on natural language queries.
- Developed a Node.js/Express REST API with optimized **aggregation pipelines** for real-time **vector similarity search**, and seamlessly integrated the endpoints into a responsive React frontend.
- Engineered a full-stack **RAG-style** pipeline - **data ingestion, embedding** generation (Hugging Face access token + OpenAI), MongoDB **vector indexing**, and API-driven recommendations - end-to-end.

AI Voice Dental Assistant SaaS | [Live Demo](#)

Tech Stack: Next.js 15, TypeScript, Prisma (PostgreSQL), Clerk, TanStack Query, Vapi AI, Resend, Tailwind CSS, Shadcn UI

- **Architected a secure, full-stack appointment booking engine** using Next.js Server Actions and Prisma, implementing server-side race condition checks to **prevent double-booking** during **concurrent user requests**.
- **Engineered a tiered subscription management system** (Free + 2 Paid Plans) via Clerk, featuring smart prorated upgrade logic and an automated Resend email pipeline for real-time, dynamically formatted booking confirmations.
- **Designed robust data transformation layers** to map complex Prisma relational models (User, Doctor, Appointment) into clean, UI-ready DTOs (Data Transfer Objects), ensuring strict type safety and scalable data persistence.

Stripe Payment & Subscription SaaS | [Live Demo](#)

Tech Stack: Next.js, Stripe API, TypeScript, Tailwind CSS, Vercel, Webhooks, Convex, Clerk, Upstash Redis, Resend, React Email.

- Engineered a full-stack SaaS app with a **webhook-driven** payment system handling one-time purchases and recurring subscriptions processing 10+ Stripe event types (*checkout.session.completed*, *customer.subscription.updated/deleted*, *invoice.paid*) to keep database state in sync with billing lifecycle in real time.
- Architected secure payment infrastructure integrating **Clerk auth**, **Convex real-time database**, **Stripe Webhook** and **billing portal**, enabling customers to self-manage subscriptions (upgrade/cancel) without manual backend intervention.
- Implemented **idempotent webhook** handlers to correctly process out-of-order and duplicate Stripe events (a single checkout can fire 5+ related webhooks), ensuring accurate order fulfillment and subscription status updates.

Real-Time Group Chat Application (Proof of Concept) | [Live Demo](#)

Tech Stack: React, Node.js, Express.js, Socket.IO, Render (Backend), Netlify (Frontend)

- **Architected a unified Node.js/Express server** to handle both standard HTTP requests and persistent WebSocket connections on a single port, leveraging the HTTP-to-WebSocket upgrade protocol (HTTP 101) for persistent, full-duplex communication.
- **Implemented real-time state synchronization** for features like live **typing indicators** and **user presence** (join/leave events), utilizing Engine.IO's automatic fallback to HTTP long-polling to ensure reliable connectivity across all networks and ensuring seamless UI updates across all connected clients.
- Implemented unit and integration tests using Vitest and React Testing Library (90%+ coverage) to ensure code reliability

EDUCATION

Daffodil International University

Bachelor of Science in Computer Science and Engineering | 2017 – 2021
